***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14 and 27-35, drawn to apparatus comprising laser apparatus having deflection and controller units.
- II. Claims 15-26, drawn to methods for processing electric circuit substrates having a photosensitive layer.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used for cutting or for texturing substrates other than electric circuit substrates.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

During a telephone conversation with Donald J. Daley on August 27, 2004 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-14 and 27-35. Affirmation of this election must be made by applicant in replying to this Office action. Claims 15-26 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

#### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The instant claimed arrangement for processing a substrate comprising a solid-state laser of a wavelength between 266 nm and 1064 nm and adapted to emit laser radiation with a pulse repetition rate of between 1kHz and 1 MHz and a pulse length of 30 ns to 200 ns and an average laser power of around 0.1 to approximately 5W and a deflection unit adapted to deflect the laser at speeds of up to 600 mm/s and a controller adapted to operate the laser depending on an application for the laser with different combinations of average laser power and repetition rates is not disclosed in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel M Heinrich whose telephone number is 571-272-1175. The examiner can normally be reached on M-F.
